Category	Diabetes (Pediatric Adult or Gestational)
Abstract	<p>Background: Poorly managed diabetes leads to serious complications and early death and there is a need for trained manpower to deal with the challenges. So bridging the gap of trained health professionals in combating Diabetes, PHFI along with DMDEA has initiated a one year comprehensive course in diabetes management (CCEBDM) in 2010 to build capacity of health care professional and competencies in diabetes management. CCEBDM is a uniquely designed monthly executive training program for primary healthcare physicians. It is held on only designated Sunday of the month and conducted by trained diabetologists or endocrinologists in their respective cities. It improves primary care physicians' knowledge and skills in the newer evidence based practices in diabetes care management. Till now, 5082 primary care physician have been trained in consecutive 3 cycles with the help of 165 regional faculties in 73 cities. The program achieved a milestone on 8th November 2013 when The IDF announced the course as an IDF recognized program globally.</p> <p>Objectives: CCEBDM began with the objective of training primary care physicians to improve their knowledge and skills in the newer evidence based practices in diabetes care management with the ultimate aim of improving patient outcomes. The course has also provided a platform to establish networks among primary care physicians and the already established diabetes care centers for sharing knowledge and establishing referral linkages.</p> <p>Results: Program was implemented all across the country cover 74 cities with multi stakeholder engagement. Unique operation management was designed for flawless financial operation, academic compliance, quality and extensive communication among the diverse stakeholders. Information System was designed and developed with essential validation and logical approach.</p> <p>Conclusion: CCEBDM is a complete knowledge transfer program through wide network which are dependent on timely deliverable and extensive communication among the stakeholders. Operational strategies and Robust MIS acts as a strong backbone for such National level capacity building initiative to maintain the quality and achieve the objective towards better prevention, treatment, support and management of Diabetes Mellitus.</p>
